KIIT University, Bhubaneswar, India

Aspiring Machine Learning Engineer

SUMMARY

Aspiring Machine Learning Engineer skilled in developing and deploying advanced AI models, with hands-on experience in explainable fake news detection, recommendation systems, and medical image analysis. Proficient in **Python, C++, and key ML frameworks**, with a strong track record of **impactful projects and research publications**.

EDUCATION

Year	Degree/Exam	Institute	CGPA/Percentage
2025	B.Tech, Computer Science and Engineering	Kalinga Institute of Industrial Technology, Bhubaneswar	8.56 / 10
2020	Higher Secondary Certificate (HSC), CBSE	St. Thomas School , Ghaziabad	89.8%
2018	Secondary School Certificate (SSC), CBSE	St. Thomas School , Ghaziabad	84.6%

INTERNSHIPS AND PROJECT

Explainable Fake News Detection using Dynamic Feed back | Jan' 25 - Mar' 25 Dr. Satyananda Champati Rai
Bhubaneswar, Kalinga Institute of Industrial Technology (KIIT)

- Curated and led the development of an explainable fake news detection system to address the growing challenge of misinformation, aiming to surpass the limitations of older detection methods.
- Fine-tuned Llama 3.2 1b using Unsloth and LoRA techniques, significantly reducing computational costs and enabling rapid iteration, especially for generating context-aware fake news justifications.
- Utilized ISOT and Indian Fake News datasets from Kaggle for robust model training.
- Integrated Ollama' s Model File for efficient management and deployment of custom fine-tuned models, allowing configurable control and seamless backend integration.
- Employed Langchain, Langgraph, and PyTorch to build and orchestrate the model pipeline; leveraged LLMs to generate explanations for predictions, enhancing transparency.
- Achieved **77.69%** accuracy with inter-adversarial prompting and **50.80%** with self-reflection prompting.
- Overcame challenges in developing inter-adversarial prompting and fine-tuning free LLMs for high-quality output.

SKILLS

- Programming Languages:** Python, C++, C.
- Hard Skills:** Linear Algebra, Statistics, Data Visualization, Data Cleaning, Neural Networks, Exploratory Data Analytics, Data Interpretation.
- Frameworks and Libraries:** PyTorch, Sklearn, Matplotlib, Seaborn, Pandas, Numpy.
- Soft Skills:** Time Management, Communication, Teamwork, Leadership, Event Management, Event Planning, Problem Solver.

VOLUNTEER

- AISoC KIIT University** | Team Member Jan' 23 - May' 24
- Played a foundational role in establishing the AI Society at KIIT University, helping it to grow over **100** members focused on AI research and innovation.
 - Assisted in organizing **Symposium v1.0**, an online webinar at KIIT University, aimed at discussing the latest developments in artificial intelligence.
- Organizing Committee** | KIIT FEST '22 Mar' 22
- Led the creation and execution of a **problem-solving / puzzle challenge**, consisting **5** stages requiring teams to effectively use resources and find unique solutions.
 - Coordinated an event with over **20+ teams** participating, demonstrating the competition wide reach and positive results.

PUBLICATIONS

- ArsenicSkinNet** | An arsenic skin cancer detection system Published in Springer
Submitted to MIWAI conference 2024, Pattaya, Thailand
Under the guidance of George Rabeshi Obaido, University of California, Berkeley
- Developed **ArsenicSkinNet** , a deep learning model adapted from the EfficientNet architecture, achieving 99.61% classification accuracy for arsenicosis skin lesion detection.
 - Contributed to advancing public health solutions by designing an automated system for early detection and management of arsenicosis, reducing diagnostic variability.
 - Utilized **transfer learning** techniques to enhance model efficiency, enabling high performance with minimal computational resources for low-resource settings.
